Module 1 - Front-End Web Development

JavaScript – Template Literals and Arrow Functions

Overview

In this exercise, you'll master modern JavaScript syntax including template literals and arrow functions. You'll learn to write more concise and readable code using these ES6+ features. This will modernize your coding style and make your code more maintainable.

Requirements:

// TODO: Create a multiline string using template literals

// TODO: Create a function that uses template literals for HTML generation

// TODO: Convert regular functions to arrow functions

// TODO: Use arrow functions with array methods

Submission:

Save your code in a file named **temp_lits_arrow_funct.js** and upload it to the LMS. Demonstrate your code and the console output to your instructor.
