Module 1 - Front-End Web Development

JavaScript – Array Basics

Overview

In this exercise, you'll explore JavaScript arrays and their fundamental operations. You'll learn how to create arrays, add and remove elements, and access array information. This will give you practical experience in managing collections of data, a crucial skill for handling lists of information in your programs.

Requirements:

// TODO: Create an empty array called colors

// TODO: Add three colors to the array using push()

// TODO: Create another array called numbers with five numbers

// TODO: Remove the last color from the colors array

// TODO: Add a new color to the beginning of the colors array

// TODO: Print the length of both arrays

Submission:

Save your code in a file named **arrays.js** and upload it to the LMS. Demonstrate your code and the console output to your instructor.
